

 BRIGHTHANDLE

Enjoy!

Alfa

Alfa (Alfa battery and Alfa online)

Alfa battery is suitable for residential bathroom and toilet doors. The handle indicates the bathroom is occupied with a red light on the outside of the door, activated by the thumb turn. When the bathroom is vacant the handle signals no light. On the inside of the door Alfa battery has a matching Brighthandle Zero handle in stainless steel, which contains the battery.

Power supply: Two AA batteries.

Alfa online has numerous possible applications; public bathrooms, conference rooms, dressing rooms to mention only a few. The handle indicates that the room is occupied with a red light on the outside of the door, activated by the thumb turn. When the room is vacant there is a continuous green light on the outside. On the inside of the room Alfa online is available with:

- A matching Brighthandle Zero handle in stainless steel. (*Alfa online*)
- A handle communicating with light, identical to the handle on the outside of the room. (*Alfa online duo*)

Power supply: Direct electricity supplied with wires through the door.

Swap

Swap is suitable for anyone who wants to 'leverscape' the interior of a residential home or a public environment in style. The design is consistent with the products Alfa battery, Alfa online and Zero. *Swap* comes with a strict transparent plexus glass handle. Several additional colors are available as accessories that are easily exchangeable to suit a certain interior design, or why not to match the seasons or holydays?

Power supply: No power is required

Swap

Swap

Zero

Zero

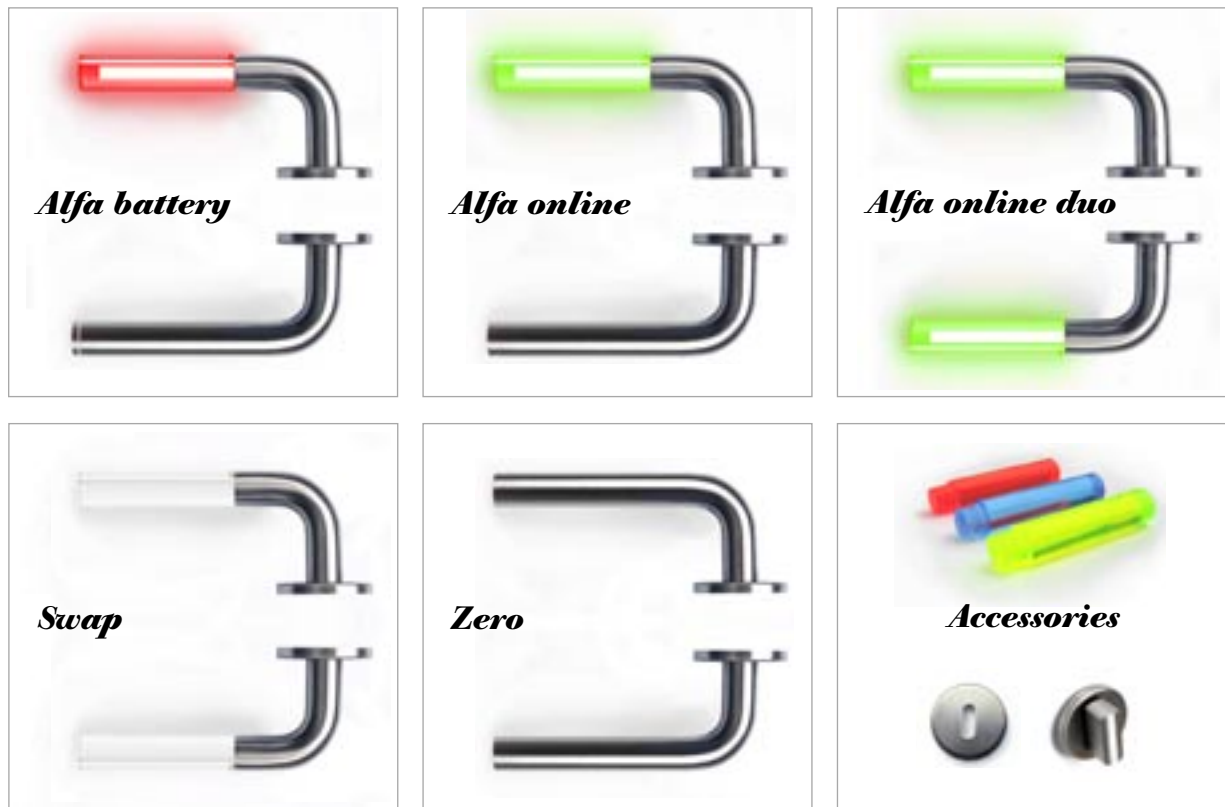

Zero is a high-end handle in stainless steel. The design is consistent with the products Alfa battery, Alfa online and Swap; designed in order to consistently fit the interior design of a residential home or public environment. *Zero* does not communicate with light.

Power supply: No power is required.

Accessories

Displayed to the right is the current Brighthandle escutcheon and thumbturn design in high-end stainless steel.

Brighthandle

Brighthandle is committed to bring change to the door handle industry. We create innovative products and solutions that increase the value and functionality of the door handle from an end user perspective. In addition, Brighthandle dramatically enhances the design of the door environment.

The history of Brighthandle starts in 2001 when Alexander Lervik, lead designer and co-founder of Brighthandle, came

up with the idea to create a door handle that communicates with colored light. Alexander created a prototype that he displayed at the international furniture fair in Milan, 2001. The response was massive. Brighthandle was considered one of the most innovative products at the fair and the product was selected 'product of the year' in the hardware category in the American magazine Architectural Record.
